

IHH Healthcare Onboarding Primer

A concise guide for new recruits: purpose, culture, innovation, sustainability and professional expectations

IHH Healthcare Berhad is a major international private healthcare services provider headquartered in Malaysia. Its integrated healthcare network spans 10 countries, and its official corporate profile describes the group as one of the world's largest healthcare networks with 89 hospitals. This primer introduces IHH in a practical way for new recruits by connecting the company's business scale with its aspiration to deliver trusted, patient-centred care.

89 hospitals in 10 countries	190 healthcare facilities
76,000 skilled professionals	Care. For Good. shared sustainability aspiration

Core identity

- IHH provides hospital and healthcare services across key markets such as Malaysia, Singapore, India, Türkiye, Greater China and Europe.
- The group operates through established brands including Gleneagles, Pantai, Parkway, Acibadem, Fortis, Mount Elizabeth and Prince Court.
- Its annual reporting theme, "Growth with Purpose", links business performance to clinical excellence, innovation and meaningful patient impact.
- For new recruits, the main message is that every role contributes to safety, trust, service quality and continuity of care.

Recruit takeaway: IHH is not only a hospital operator. It is a cross-country healthcare ecosystem where clinical standards, patient experience, teamwork and sustainability are connected.

Primer purpose

This primer is designed as an onboarding document. It does not replace formal policies, but it helps new employees understand what IHH stands for and how their work fits into the organisation's broader healthcare mission.

1. Values, Culture and the ACE Framework

How IHH expects its people to work, communicate and improve

A strong healthcare organisation depends on both technical competence and professional behaviour. IHH's culture is anchored in patient-centred service, ethical conduct and continuous improvement. The company's "Care. For Good." aspiration also frames care as a long-term responsibility towards patients, employees, communities and the environment.

ACE Framework

ACE element	Meaning for new recruits
Align	Work towards shared goals across departments, hospitals and markets. Alignment helps employees give consistent service and avoid fragmented care.
Challenge	Think critically, identify gaps and improve processes instead of accepting inefficient practices.
Empower	Build confidence, ownership and professional growth so staff can contribute ideas and take responsible action.

One IHH culture

- Respect colleagues across different roles, cultures, generations and professional backgrounds.
- Communicate clearly, especially when patient safety, handover, documentation or customer service is involved.
- Ask questions when unsure; in healthcare, early clarification can prevent risk and improve service quality.
- Act with integrity when handling patient information, financial records, operational data and public communication.
- Practise empathy towards patients and families because anxiety, illness and waiting time affect patient experience.

Professional standard: A new recruit should not view culture as "soft skills only". In healthcare, respectful teamwork, accurate communication and ethical behaviour directly affect patient outcomes and organisational trust.

In short, IHH's culture asks employees to combine competence with care. Employees are expected to contribute to a professional environment where patients feel safe, colleagues feel supported and improvement is treated as everyone's responsibility.

2. Care for People: Well-being, Development and Inclusion

Why employee support is essential to healthcare quality

Healthcare service quality depends heavily on people. IHH's sustainability approach recognises employees as the foundation of patient care. The company's people agenda includes workplace safety, mental well-being, professional development, engagement and diversity, equity, inclusion and belonging.

Employee well-being and development

- IHH reported more than 1.2 million training hours in 2024, showing investment in capability development and consistent service standards.
- The group achieved zero workplace fatalities in 2024 and continued to monitor lost-time injuries as part of its workplace safety agenda.
- Its nursing talent pool increased by 14% against the 2022 baseline, exceeding the 10% target set for 2025.
- Employee engagement performance was reported above the global healthcare benchmark, indicating that staff experience is treated as a measurable organisational priority.

Diversity and inclusion

Diversity is particularly important in healthcare because hospitals serve patients with different languages, cultures, expectations and health needs. Inclusive teams are more likely to communicate sensitively and respond to patient concerns with empathy.

DEIB dimension	Workplace meaning
Gender	Supporting leadership balance and equal opportunity.
Generational	Enabling collaboration between experienced and younger employees.
Differently abled	Recognising ability diversity and inclusive participation.
Skillset	Valuing clinical, digital, administrative and service expertise.
Cultural	Strengthening culturally respectful care across diverse markets.

2024 proof point: Women held 49% of leadership roles group-wide, close to the 50:50 leadership target. This supports IHH's message that inclusion is monitored as part of organisational performance.

3. Innovation and Technology

Using digital and advanced healthcare tools to improve patient outcomes

Innovation is a key differentiator for IHH because modern healthcare requires faster access, safer processes and more precise treatment. The 2024 Sustainability Report highlights digital healthcare apps that integrate online and offline care; in 2024, more than eight million patients gained access to their medical records online through these apps.

Examples of technology-enabled care

- Digital healthcare apps allow patients to manage parts of their healthcare journey more conveniently, including access to medical records.
- Artificial intelligence and analytics can support earlier detection, clinical decision-making and patient safety initiatives.
- Advanced diagnostics and treatment technologies, including robotics and proton therapy-related partnerships, support more precise and specialised care.
- Centralised digital systems improve workflow visibility, documentation quality and service coordination across facilities.

Why this matters to new recruits

Technology is not only the responsibility of IT or clinical specialists. New employees contribute by learning approved systems, protecting patient data, reporting process issues and adapting to digital workflows. In a healthcare environment, effective technology use must be paired with data privacy, cybersecurity awareness and human judgement.

Area	Academic interpretation
Patient benefit	Greater convenience, improved access to records, better safety monitoring and more coordinated care.
Employee responsibility	Use digital tools accurately, follow data protection rules and communicate technology-related problems early.
Organisational value	Innovation supports clinical excellence, operational efficiency and long-term competitiveness.

Key message: Innovation in IHH should be understood as patient-centred improvement, not technology for its own sake.

4. Sustainability: Patients, People, Public and Planet

Connecting healthcare delivery with long-term social and environmental responsibility

IHH frames sustainability through its “Care. For Good.” aspiration. This means the organisation aims to move beyond simply avoiding harm and instead create positive impact for patients, employees, communities and the planet. The four-pillar structure is useful for new recruits because it shows how sustainability is connected to everyday hospital operations.

Pillar	Focus area
Patients	Quality care, safety, patient experience, digital access and value-driven outcomes.
People	Workforce safety, training, mental well-being, engagement and inclusion.
Public	Community programmes, healthcare access and support for vulnerable groups.
Planet	Energy efficiency, renewable energy, emissions reduction, waste management and reduced single-use plastics.

2024 sustainability progress

- The number of Value-Driven Outcomes quality indicators increased from 113 to 202, strengthening how IHH monitors healthcare quality.
- The group reduced emissions intensity per patient bed day by 3.2%, indicating progress in linking environmental action with healthcare operations.
- IHH reported more than 90% reduction in single-use virgin plastics in non-clinical areas across Malaysia, Türkiye, Singapore and Hong Kong.
- The group also reduced desflurane use by up to 55% across core markets, an important healthcare-related climate action because anaesthetic gases contribute to greenhouse gas emissions.

Practical meaning: Sustainability is not separate from hospital work. It appears in energy use, procurement, waste handling, patient safety, training, inclusion and community care.

For new recruits, this means responsible behaviour matters even in routine tasks. Accurate documentation, privacy protection, careful resource use and respectful service all support IHH's sustainability story.

5. Key Proof Points and Final Message for New Recruits

Evidence-based summary of IHH's scale, performance and employee expectations

A strong primer should help new employees remember the evidence behind the company story. IHH's 2024 reporting shows both financial growth and sustainability progress, making the organisation's public message more credible and measurable.

RM24.4b Group revenue in FY2024	RM5.4b EBITDA in FY2024
8m+ patients with online medical record access	202 VDO quality indicators in 2024

What new recruits should remember

- IHH is a large, multi-market healthcare group, but its core promise is still personal: safe, respectful and high-quality care.
- The ACE Framework encourages employees to align with shared goals, challenge weak processes and feel empowered to improve work practices.
- People development and inclusion are not optional; they support patient experience, teamwork and organisational resilience.
- Innovation is valuable when it improves access, safety, clinical quality and operational efficiency.
- Sustainability connects patient care, employee well-being, community contribution and environmental responsibility.

Final onboarding message: Every employee, whether clinical or non-clinical, contributes to IHH's purpose of touching lives and transforming care through professional, ethical and patient-centred work.
